

Nitocote SN502 - Penetrating Silane/Siloxane Concrete Treatment

Canonical: <https://fosroc.directory.norg.ai/construction-materials/concrete-protection-sealers/nitocote-sn502-penetrating-silanesiloxane-concrete-treatment/>

Description:

Nitocote SN502 is a single-component penetrating silane-siloxane system which significantly reduces the absorption of water and water borne salts, whilst allowing the passage of water vapour out from the substrate. Ideal for protecting atmospherically exposed reinforced concrete structures including those in coastal environments. Reduces water and chloride intrusion, penetrates into porous substrates, non-staining, and provides 92% reduction in chloride ion penetration (NCHRP 244 Standard).
