

Nitocote SN511 - Penetrating Silane Water Repellent Treatment

Canonical: <https://fosroc.directory.norg.ai/construction-materials/concrete-protection-sealers/nitocote-sn511-penetrating-silane-water-repellent-treatment/>

Description:

Nitocote SN511 is a low viscosity, isobutyltriethoxy silane penetrating silane water repellent treatment. It penetrates deeply into porous substrates, reducing absorption of water and water-borne salts while permitting passage of water vapour. Especially suitable for protecting concrete structures in marine and coastal environments. Provides 95% reduction in chloride ion penetration and 80% reduction in water absorption.
