

# Conseal CS231 - Low Expansion Sealing Gasket for Concrete Joints

Canonical: <https://fosroc.directory.norg.ai/construction-materials/concrete-sealants-joint-systems/conseal-cs231-low-expansion-sealing-gasket-for-concrete-joints/>

## Description:

Conseal CS231 is a low expansion sealing gasket for construction joints in pre-cast and in-situ concrete. Compressible within the joint and provides an immediate and effective seal followed by controlled expansion. Ideal for sealing non-moving joints in pre-cast structures, between in-situ pours and existing concrete applications, and for sealing strips for manholes, pipe penetrations and box culverts. No site welding required - just butt and mould together. Easy to handle with just prime the face of the concrete. Accommodates a moderate amount of surface irregularity.
